Forecast for Friday 12 May 2023

Weather: Low cloud pushes across the region from the east overnight and likely to be fairly extensive Friday morning, along with mist and fog patches and perhaps some light drizzle at times across the summits. Becoming brighter mid-morning as low cloud lifts with perhaps a few sunny spells developing towards midday and through the afternoon. The best of these breaks most likely to the south and west of the region, with areas to the north and east perhaps remaining mostly cloudy throughout the day.

Chance of cloud-free hill tops above 600m: 20% rising to 70% through the morning and improving to 90% across southern and western hills.

Low cloud and visibility: Extensive low cloud likely causing poor visibilities to start, this cloud then lifting above most summits by mid-morning, but may linger for longer across northern and eastern hills
